

Serial No. 10/696,568

Attorney Docket No. 03-038

REMARKS

Claims 1, 2, and 4-7 are pending. Claim 3 has been canceled. The applicants respectfully request reconsideration and allowance of this application in view of the above amend

Claims 1-7 were rejected under 35 USC 103(a) as being unpatentable over JP-A-8-216735. The applicants respectfully request that this rejection be withdrawn for the following reasons.

The object of the present invention is to prevent a deterioration of sensitivity in the radio receiver due to noise from a high-frequency signal source.

Claim 3 has been combined with claim 1, and claim 3 has been canceled. Since claim 1 now is the same as original claim 3, no new issues are raised by this amendment, and entry of this amendment is respectfully requested.

Although the office action states that the present invention is obvious in view of the cited Japanese publication, the Japanese publication fails to disclose or suggest the features claimed in claim 1. In particular, the Japanese publication fails to disclose that the high-frequency signal source is a communication unit for intercommunicating with an external network. In other words, the combination of the high-frequency signal source and the radio receiver is not disclosed in the Japanese publication.

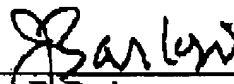

In view of the foregoing, the applicants submit that this application is in condition for allowance. A timely notice to that effect is respectfully requested. If questions relating to patentability remain, the examiner is invited to contact the undersigned by telephone.
